

Please amend the application as follows:

IN THE SPECIFICATION

Please replace the specification in its entirety with the attached Substitute Specification. Marked-up and clean versions of the specification are provided.

The specification has been amended to replace the word "translucent" with the word "transparent", which is a more appropriate English language translation of the original Japanese. No new matter has been added.

Please **replace** the Abstract in its entirety with the following:

A module for an optical device being provided with a wiring substrate having a conductive wiring patterned thereon, a solid-state image sensor, a DSP for controlling the operation of the solid-state image sensor and processing a signal outputted from the same, and a lens holder being placed opposite to the solid-state image sensor and having a function of an optical path demarcating unit for demarcating the optical path to the solid-state image sensor, wherein a ~~transparent~~~~translucent~~ cover bonded to the surface of the solid-state image sensor is joined to the lens holder at a joint portion. It is unnecessary to provide a focus adjuster for matching the optical distance between the lens and the solid-state image sensor with the focal length of the lens.
